1. Introduction

1.1 Purpose

The purpose of this software requirement specification (SRS) document is to provide a comprehensive description of the functional and non-functional requirements for OneClickVitals as well as its development environment. This SRS document will also serve the purpose of a contract between the development team and customers, for whom this product is being developed.

1.2 Scope

OneClickVitals is web-based medical record system software that seeks to improve the efficiency of patient medical data storage and management. It will also allow doctors and their medical staff to focus their time and attention on the patient instead of spending hours on documentation, thus improving the quality of the care provided by their office. OneClickVitals is designed to cater to a medical clinic with one doctor, his/her medical staff and their patients. Users can add, view and edit information based on the role they play and the permissions assigned to them. OneClickVitals allows users to create, view and edit new patient accounts, add, view and edit appointments, add and view vital signs, diagnosis, prescriptions, order lab tests and add lab test results.

There are three Users of OneClickVitals: Doctor, Staff and Patient. Each user will have their own accounts and corresponding permissions in the system. Doctor will be the owner of the software product and will have all the permissions in the system. Staff will not be permitted to add diagnosis and prescriptions. Patient cannot edit their profile, they can only view their personal information. Patient will be provided with a username and password by the doctor's office.

1.3 Definitions, Acronyms, and Abbreviations

Glossary

Term	Definition and Information
------	----------------------------

SRS	Software requirement specification
User	Person who uses the software application
Patient Account	Created by the doctor's office to maintain patient records
Summary	Brief description of the patient's visit on a particular date including diagnosis, prescription, vital signs, appointment information
System	An assembly of interconnected electronic components. This word refers to the OneClickVitals application
Web application	A computer application that runs on a web browser
Staff	A person who performs routine clinical and administrative duties under the direct supervision of a physician or other health care professional
Doctor	Licensed physician permitted by law and by a hospital to provide medical care within that hospital or facility
Patient	A person who seeks medical care

1.4 Intended Audience

The intended audiences of this SRS document are the users of the application, as well as the software development team working on the project. This document will help the users in understanding the functional and non-functional requirements of this software application. All the features that are in the scope of the project are clearly listed for the users. This will also help the software development team to build a software that fulfills all the requirements mentioned in this SRS document.

1.6 Overview

The following is a description of how the remaining sections of this SRS document are organized:

Section 2: This section provides a high level description of the software application, OneClickVitals including product perspective and functions, required interfaces, user characteristics and assumptions. It also contains the context diagram.

Section 3: This section provides a detailed description of functional and non-functional requirements of the software application.

Section 4: This section contains the Trace Back Table to help identify, evaluate and incorporate the changes in requirements as this application is being developed iteratively.

2. The Overall Description

2.1 Product Perspective

OneClickVitals is a Medical Record System software application, which is developed to simplify the way doctors maintain and retrieve patient's medical records. It will also make creating, editing and tracking appointments easy. It will also help in reducing the human errors and the time taken for documentation. OneClickVitals is evolving software as it is being developed iteratively.

2.1.2 Software

- **Database:** SQLite
- **Operating system:** Ubuntu/Linux and Mac OSX
- **Programming language:** Python 3.4.0
- **Framework:** Django

- **Libraries:** JQuery, Bootstrap
- **Diagramming application:** Microsoft Visio
- **Source code editor:** Atom, Brackets
- **Source code repository:** Github
- **Presentation software:** Microsoft PowerPoint

2.2 Product Functions

Actors:

Primary Actor	Doctor and Staff
Secondary Actor	Patient

List of Use Cases:

Name	Actor	Priority
Login User	Doctor, Medical Staff, Patient	High
Logout User	Doctor, Medical Staff, Patient	High
Manage Patient Account	Doctor, Medical Staff	High
Manage Appointments	Doctor, Medical Staff	High
Add Vital Signs	Doctor, Medical Staff	High
View Vital Signs	Doctor, Medical Staff	High
Add Diagnosis	Doctor	High
Add Prescriptions	Doctor	High
Manage Radiology	Doctor, Medical Staff	Medium
Order Lab Tests	Doctor	High
Add Lab Results	Doctor, Medical Staff	High

Print Summary	Doctor, Medical Staff	Medium
View Personal Profile	Patient	Medium
View Appointments	Patient	Medium
View Prescriptions	Patient	Medium
View Diagnosis	Patient	Medium
View Lab Tests	Patient	Medium
View Vital Signs charts	Patient	Low

Context Diagram:

2.3 User Characteristics

There are three categories of users (Actors) for OneClickVitals: Primary User, Secondary User and Off Stage User.

Primary users include the doctors, staff (medical assistants). Initial release of the software will be for one doctor and his/her medical staff. The user may login to the system through a browser several times a day to access information or to enter new information.

Secondary users of OneClickVitals are the patients. Initial release of the software will be for 50 patients. They will sign in to the system using the username and password given to them by the doctor's office. Patients will be able to view their profile information, appointments, diagnosis, prescription and lab test orders. It is expected that they have basic understanding of how to use a computer and how to navigate through a web application.

U.S. Department of Health & Human Services is the off stage actor.

2.4 Constraints

OneClickVitals is not a native application to mobile devices but the user can access the application through their mobile devices due to the responsive design of the application.

2.5 Assumptions and Dependencies

We assume that the user of this application has basic knowledge of how to navigate through a web application. We also assume that the user has laptop or desktop computers with access to internet connection and has one or more of the following web browsers installed on their computers: Google Chrome, Firefox, Internet Explorer 10 and higher.

3. Specific Requirements

3.1 Functions

Primary actor: Doctor

3.1.1. Login User

The User will be able to log into the application by entering username and password. The system will validate the username and password.

3.1.1.0 The system **SHALL** display a login form where the User can enter username and password.

3.1.1.1 When the User enters the username and password and clicks the “Login” button, the system **SHALL** check for the validation of the User’s username and password.

3.1.1.2 If the User enters an incorrect combination of the username and password, the system **SHALL** display error message and prompt the User to try login again.

3.1.1.3 If the User enters a correct combination of the username and password, the system **SHALL** display the application homepage.

3.1.2. Logout User

The User will be able to log out of the application. The system will confirm that the User is logged out.

3.1.2.0 When the User clicks on the “Logout” button, the system **SHALL** display a message that the User has been logged out of the application.

3.1.3. Manage Patient Account

The User will be able to create new patient account by filling the all the forms in the tabs. The system will check if all the required fields are filled. When all the required fields are filled, the system will confirm patient account creation.

3.1.3.0 When the User clicks on the “Add Patient” button, the system **SHALL** display New Patient, Patient Details, Emergency Contact, Medical History, Family History and Pharmacy Details forms in tabs.

3.1.3.1 After the User fills the forms and clicks on the “Next” button, the system **SHALL** display the form in the next tab.

3.1.3.2 After the User fills in forms in all the tabs and clicks on “Save” button on the Pharmacy Details form tab, the system **SHALL** check for all the required fields and prompt the User to fill in all the required fields.

- 3.1.3.3 If all the required fields are filled, and the User clicks on “Save” button, the system **SHALL** confirm that adding the newly added account to a patient profile list has created a new patient account.
- 3.1.3.4 When the User clicks on “View Patient” button, the system **SHALL** display a list of all the patient profiles.
- 3.1.3.5 When the User clicks on the patient name, the system **SHALL** display the patient details in tabs.
- 3.1.3.6 When the user navigates to “Edit Patient”, the system **SHALL** display the forms with existing information pre-populated in the form.
- 3.1.3.7 If the User leaves some required fields empty, the system **SHALL** prompt the User to fill in all the required fields.
- 3.1.3.8 If all the required fields are filled, and the User clicks on “Save” button, the system **SHALL** confirm that the patient profile is saved.

3.1.4. Manage Appointments

The User will be able to make new appointments, update existing appointments, or cancel appointments. The system will confirm appointment creation, changes, and cancellation.

- 3.1.4.0 When the User clicks on the “Add Appointment” button, the system **SHALL** display the Add New Appointment form.
- 3.1.4.1 If the User fails to enter any of the required fields and clicks on the “Save” button, the system **SHALL** prompt the User to fill in the required fields.
- 3.1.4.2 After the User fills the appointment form and clicks on the “Save” button, the system **SHALL** confirm that the appointment is saved.
- 3.1.4.3 If the User clicks on the “Edit” button, the system **SHALL** display an appointment form with the fields prepopulated with the current information. After the User modifies the information and clicks on the “Save” button, the system **SHALL** display a confirmation message that the appointment is saved.

3.1.5. Add Vital Signs

The User will be able to add vital signs prior to evaluating the patient. The system will save the vital signs and display a confirmation message.

- 3.1.5.0 When the User clicks on the “Add Vital Signs/Diagnosis” button, the system **SHALL** display empty fields for vital signs.
- 3.1.5.1 When the User enters the information in the fields and clicks on the “Save” button, the system **SHALL** check if all the required fields are filled in.
- 3.1.5.2 If the User fails to fill in all or some of the required fields in the form, the system **SHALL** prompt the User to fill in all the fields.

3.1.6. View Vital Signs

The User will be able to view vital signs prior to evaluating the patient. The system will display the list and details of vital signs

3.1.6.0 When the User clicks on the “View Vital Signs” button, the system **SHALL** display a list of vital signs.

3.1.6.1 When the User clicks on the patient name, the system **SHALL** display Vital signs details

3.1.7. Add Diagnosis

The User will be able to add diagnosis while evaluating the patient. The system will save the diagnosis and display a confirmation message.

3.1.7.0 When the User clicks on “Add Diagnosis” button, the system **SHALL** display add diagnosis form with the vital signs prepopulated.

3.1.7.1 If the User fails to fill in all or some of the required fields in the form, the system **SHALL** prompt the User to fill in all the fields.

3.1.7.2 When the User enters the all the required information in the fields and clicks on the “Save” button, the system **SHALL** confirm that diagnosis is saved.

3.1.8. Add Prescriptions

The User will be able to write prescriptions. The system will check that all the required fields are correctly filled and display confirmation message.

3.1.8.0 When the User clicks on the “Add Prescription” button, the system **SHALL** display prescription form.

3.1.8.1 If the User fails to enter any of the required fields and clicks on the “Save” button, the system **SHALL** prompt the User to fill in the required fields.

3.1.8.2 If all the fields are filled, the system **SHALL** display a confirmation message that contains the prescription is saved in the system.

3.1.8.3 When the User clicks on “View Prescription”, the system **SHALL** display a list of all the prescriptions saved.

3.1.8.4 When the User clicks on the patient name, the system **SHALL** display the details of the selected prescription.

3.1.9. Manage Radiology

The User will be able to add radiology films by selecting a file to be uploaded and view the uploaded films.

3.1.9.0 When the User clicks on “Add Radiology” button, the system **SHALL** display an empty add radiology form.

3.1.9.1 If the User fails to enter any of the required fields and/or fails to select the file to be uploaded, the system **SHALL** prompt the User to fill in the required fields.

- 3.1.9.2 After the User fills in all the required fields in the form and clicks “Save” button, the system **SHALL** display a confirmation message that the radiology film is saved in the system.
- 3.1.9.3 When the User clicks on “View Radiology” button, the system **SHALL** display a list of the uploaded radiology films.

3.1.10. Order Lab Test

The User will be able to order lab tests by filling out the test order form. The system will check if the required fields are correctly filled and confirm test order.

- 3.1.10.0 When the User clicks on “Order Lab Test” button, the system **SHALL** display an empty lab test order form.
- 3.1.10.1 If the User fails to enter any of the required fields, the system **SHALL** prompt the User to fill the required fields.
- 3.1.10.2 After the User fills in the test order form and clicks “Save” button, the system **SHALL** display a confirmation message that the test order is saved in the system.
- 3.1.10.3 When the User clicks on “View Lab Test Order”, the system **SHALL** display the list of lab test order.

3.1.11. Add Lab Results

The User will be able to add lab results to patient account by filling out a lab result information form. The system will check if the required fields are correctly filled. If all are correctly filled, the system will confirm that the lab result has been saved.

- 3.1.11.0 When the User clicks on the “Add Results” button, the system **SHALL** display a lab result information form.
- 3.1.11.1 After the User fills the lab result information form and clicks the “Save” button, the system **SHALL** confirm that the lab results have been saved.
- 3.1.11.2 When the User clicks on “View Lab Result”, the system **SHALL** display the lab result list.

3.1.12. Print Summary

The User will be able to search a patient using their name or appointment date, view patient visit summary, and print the summary.

- 3.1.12.0 When the User clicks on “Summary” button in the appointment list or the visit record list, the system **SHALL** prompt the User to fill in both required fields.

Primary actor: Staff

3.1.13. Login User

The User will be able to log into the application by entering username and password. The system will validate the username and password.

- 3.1.13.0 The system **SHALL** display a login form where the User can enter username and password.
- 3.1.13.1 When the User enters the username and password and clicks the “Login” button, the system **SHALL** check for the validation of the User’s username and password.
- 3.1.13.2 If the User enters an incorrect combination of the username and password, the system **SHALL** display error message and prompt the User to try login again.
- 3.1.13.3 If the User enters a correct combination of the username and password, the system **SHALL** display the application homepage.

3.1.14. Logout User

The User will be able to log out of the application. The system will confirm that the User is logged out.

- 3.1.14.0 When the User clicks on the “Logout” button, the system **SHALL** display a message that the User has been logged out of the application.

3.1.15. Manage Patient Account

The User will be able to create new patient account by filling the all the forms in the tabs. The system will check if all the required fields are filled. When all the required fields are filled, the system will confirm patient account creation.

- 3.1.15.0 When the User clicks on the “Add Patient” button, the system **SHALL** display New Patient, Patient Details, Emergency Contact, Medical History, Family History and Pharmacy Details forms in tabs.
- 3.1.15.1 After the User fills the forms and clicks on the “Next” button, the system **SHALL** display the form in the next tab.
- 3.1.15.2 After the User fills in forms in all the tabs and clicks on “Save” button on the Pharmacy Details form tab, the system **SHALL** check for all the required fields and prompt the User to fill in all the required fields.
- 3.1.15.3 If all the required fields are filled, and the User clicks on “Save” button, the system **SHALL** confirm that adding the newly added account to a patient profile list has created a new patient account.
- 3.1.15.4 When the User clicks on “View Patient” button, the system **SHALL** display a list of all the patient profiles.
- 3.1.15.5 When the User clicks on the patient name, the system **SHALL** display the patient details in tabs.

- 3.1.15.6 When the user navigates to “Edit Patient”, the system **SHALL** display the forms with existing information pre-populated in the form.
- 3.1.15.7 If the User leaves some required fields empty, the system **SHALL** prompt the User to fill in all the required fields.
- 3.1.15.8 If all the required fields are filled, and the User clicks on “Save” button, the system **SHALL** confirm that the patient profile is saved.

3.1.16. Manage Appointments

The User will be able to make new appointments, update existing appointments, or cancel appointments. The system will confirm appointment creation, changes, and cancellation.

- 3.1.16.0 When the User clicks on the “Add Appointment” button, the system **SHALL** display the Add New Appointment form.
- 3.1.16.1 If the User fails to enter any of the required fields and clicks on the “Save” button, the system **SHALL** prompt the User to fill in the required fields.
- 3.1.16.2 After the User fills the appointment form and clicks on the “Save” button, the system **SHALL** confirm that the appointment is saved.
- 3.1.16.3 If the User clicks on the “Edit” button, the system **SHALL** display an appointment form with the fields prepopulated with the current information. After the User modifies the information and clicks on the “Save” button, the system **SHALL** display a confirmation message that the appointment is saved.

3.1.17. Add Vital Signs

The User will be able to add vital signs prior to evaluating the patient. The system will save the vital signs and display a confirmation message.

- 3.1.17.0 When the User clicks on the “Add Vital Signs/Diagnosis” button, the system **SHALL** display empty fields for vital signs.
- 3.1.17.1 When the User enters the information in the fields and clicks on the “Save” button, the system **SHALL** check if all the required fields are filled in.
- 3.1.17.2 If the User fails to fill in all or some of the required fields in the form, the system **SHALL** prompt the User to fill in all the fields.

3.1.18. View Vital Signs

The User will be able to view vital signs prior to evaluating the patient. The system will display the list and details of vital signs

- 3.1.18.0 When the User clicks on the “View Vital Signs” button, the system **SHALL** display a list of vital signs.

- 3.1.18.1 When the User clicks on the patient name, the system **SHALL** display Vital signs details

3.1.19. Manage Radiology

The User will be able to add radiology films by selecting a file to be uploaded and view the uploaded films.

- 3.1.19.0 When the User clicks on “Add Radiology” button, the system **SHALL** display an empty add radiology form.
- 3.1.19.1 If the User fails to enter any of the required fields and/or fails to select the file to be uploaded, the system **SHALL** prompt the User to fill in the required fields.
- 3.1.19.2 After the User fills in all the required fields in the form and clicks “Save” button, the system **SHALL** display a confirmation message that the radiology film is saved in the system.
- 3.1.19.3 When the User clicks on “View Radiology” button, the system **SHALL** display a list of the uploaded radiology films.

3.1.20. Add Lab Results

The User will be able to add lab results to patient account by filling out a lab result information form. The system will check if the required fields are correctly filled. If all are correctly filled, the system will confirm that the lab result has been saved.

- 3.1.20.0 When the User clicks on the “Add Results” button, the system **SHALL** display a lab result information form.
- 3.1.20.1 After the User fills the lab result information form and clicks the “Save” button, the system **SHALL** confirm that the lab results have been saved.
- 3.1.20.2 When the User clicks on “View Lab Result”, the system **SHALL** display the lab result list.

3.1.21. Print Summary

The User will be able to search a patient using their name or appointment date, view patient visit summary, and print the summary.

- 3.1.21.0 When the User clicks on “Summary” button in the appointment list or the visit record list, the system **SHALL** prompt the User to fill in both required fields.

Primary actor: Patient

3.1.22. Login User

The User will be able to log into the application by entering username and password. The system will validate the username and password.

- 3.1.22.0 The system **SHALL** display a login form where the User can enter username and password.
- 3.1.22.1 When the User enters the username and password and clicks the “Login” button, the system **SHALL** check for the validation of the User’s username and password.
- 3.1.22.2 If the User enters an incorrect combination of the username and password, the system **SHALL** display error message and prompt the User to try login again.
- 3.1.22.3 If the User enters a correct combination of the username and password, the system **SHALL** display the application homepage.

3.1.23. Logout User

The User will be able to log out of the application. The system will confirm that the User is logged out.

- 3.1.23.0 When the User clicks on the “Logout” button, the system **SHALL** display a message that the User has been logged out of the application.

3.1.24. View Personal Profile

The User will be able to view their profile information in forms displayed in tabs.

- 3.1.24.0 When the User clicks on the “Profile” button, the system **SHALL** display patient’s personal information in tabs.

3.1.25. View Appointment

The User will be able to view their appointment information.

- 3.1.25.0 When the User clicks on the “Appointment” button, the system **SHALL** display a list of all the patient’s appointments.

3.1.26. View Prescriptions

The User will be able to view their prescription information.

- 3.1.26.0 When the User clicks on the “Prescriptions” button, the system **SHALL** display a list containing all the prescriptions received by him/her.

3.1.27. View Diagnosis

The User will be able to view their diagnosis information.

- 3.1.27.0 When the User clicks on the “Diagnosis” button, the system **SHALL** display a list of all the diagnosis received by the patient during their visits.

3.1.28. View Lab Test

The User will be able to view the lab tests ordered for them by the doctor.

- 3.1.28.0 When the User clicks on the “Lab Test” button, the system **SHALL** display patient’s lab test orders in a list.

3.1.29. View Vitals Chart

The User will be able to view their vital signs information represented in bar charts.

- 3.1.29.0 When the User clicks on the “Vitals Chart” button, the system **SHALL** display patient’s vital signs information in bar charts.

3.2 Performance Requirements

- The system shall handle 50 concurrent users.
- The system shall have a response time of less than 1 second to open in the browser of choice by the user.

3.3 Software System Attributes

3.3.1 Reliability

- The system shall be able to handle all errors.
- The system shall display accurate information to the users based on their authorization to access the information.
- The system shall display interface(dashboard) specific to each user.

3.3.2 Availability

- The system shall be available for access and usage during the 1:00am to 11:00pm everyday.

3.3.3 Security

- The system's minimum password length is 9 alpha numeric character.

3.3.4 Maintainability

- The system shall include full documentation to allow for future enhancements.
- The system shall provide manual to help the user navigate smoothly through the software and enhance user experience.

3.3.5 Portability

- The system shall run on different web browsers such as Internet Explorer 10 and up, Firefox and Google Chrome.

3.3.6 Usability

- The system shall prompt users for any empty fields while entering information in the required fields.
- The system shall be easy to navigate between pages.
- The system shall persist all medical information being entered on a given patient.

3.3.7 Testability

- The system shall be tested using various testing tools.
- The system shall undergo static test, unit test, regression test, user acceptance test.

3.3.8 Business Continuity

- The system shall be able to recover from its last backup within fifteen minutes from crashing.
- The system's data shall be backed up at 12:00 am daily.

3.3.9 Disaster Recovery

- The system shall be able to recover from disaster within 12 hours

4. Change Management Process

Clients can make changes to the requirements and/or requests a new functionality to be added at any point during the implementation phase so it is warranted that a well-defined procedure is in place to handle such requests. Any and all requests for changes to existing features or adding new features by client should be reviewed by the project manager, who will assess the feasibility of the change by consulting the development team and approve accordingly. Once approved, the changes are implemented and later reviewed by the clients to check whether the changes on the software are according to the changes in the requirements.
